

## MODEL 201 SLITTER

The model 201 slitter is designed for slitting light to medium weight materials. Materials such as fabrics, non-wovens and lightweight carpets may be cut efficiently. The 201 slitter is based upon a twin blade scissors action principle of cutting. One blade is positively driven and one blade is frictional driven so any width material may be slit. Blades are 4 9/16 inches in diameter. Blades can normally be sharpened 10-15 times or until too thin for use. The motor is a 1/6 or 1/3 hp. gearmotor. Standard voltage is 115 volt, 60hz. Three phase is available for certain rpm outputs. Different rpm output speeds are used to match the blades circumference speed to the customer's fastest line speed. Mounting is achieved by four 3/8-16 holes in the slitter base. Trolleys are available to mount on 4" 13 lb. Or 6" 20 lb. beams. Without a trolley, the 201 weighs 55 pounds. The 201 will provide reliable slitting for light to medium weight products.
