

Artificial Turf Sewing Equipment

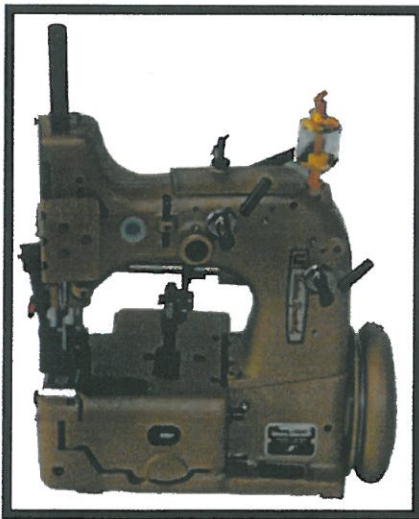

81500T Turf Sewing Machine

The model 81500T turf sewer makes a butt-seam for joining artificial turf as well as turf padding. The machine has both top and bottom feed dogs to keep the material feeding evenly through the machine. The model 81500T produces a butt-seam that can be pulled out flat and brushed down in the face of the turf.

The cart the sewing head is mounted on is used for sewing turf at field installations. The sewing head is driven by a 1725 RPM clutch motor.

80700C Bag Closer

Pictured is the model 80700C bag closer. It is often used for sewing velcro to the back of artificial turf. The 80700C has both top and bottom feed for feeding the material uniformly through the machine. The 80700C is often used on a cart such as the one pictured above. The 80700C is also often used for various geotextile applications.

The 80700C makes a double locked stitch type seam. The 80700C is a two thread machine; however, it can be converted to a single thread machine. The 80700C is a heavy duty reliable machine.
