

MODEL 900 RAILWAY BUTTSEAMER

The model 900 railway buttseamer is used for sewing a variety of light to medium weight uncoated textile products. The model 900 buttseamer was originally developed for sewing unbacked or soft carpet. It is still used by the carpet industry for sewing unbacked goods. The model 900 produces a seam which measures over 1 1/2" wide when pulled out flat. The model 900 is often used for buttseaming before finishing ranges and Kusters. The model 900 buttseamer is also often used for sewing fabric and felt products. The model 900 is electrical driven. For high speed processing lines or areas where coated or heavy products are being sewn, we recommend using our model 38500 buttseamer.
